

Maintenance Support Services

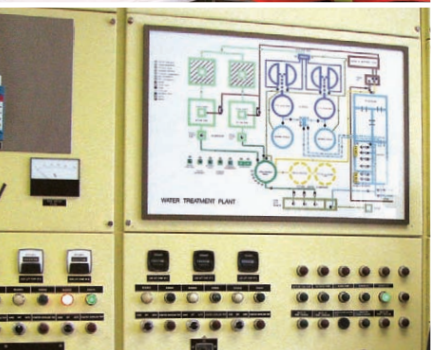

Attention Municipalities: Looking to expand your ability to maintain and manage the municipal water and wastewater infrastructure? Let OCWA help. We currently have over 60,000 assets in our **Maintenance Management Program**. We've now expanded our current Asset Maintenance Management System to offer **hosting services**. This program – a partnership between OCWA and our clients – replaces the need for a municipality to purchase and oversee a maintenance management system. Working with your staff, OCWA will inventory, plan and deliver work orders to your operators, enabling your staff to complete the hands-on maintenance.

Advantages:

- Ensures your systems are maintained on time and on budget
- Assists with Drinking Water Quality Management Standard (DWQMS)
- Provides long-term inventory and replacement costs and supports annual capital budgeting – as part of PSAB
- Helps municipalities meet federal regulations for hazardous materials by maintaining an inventory of supply and usage
- Assists in meeting current oversight requirements as part of the Statutory Standard of Care

Trust. It flows from experience & commitment.

Helps track:

- Sampling requirements
- C of A requirements
- Environmental regulations
- Health and Safety regulations
- Inspections and certifications

OCWA can also provide:

- Major Maintenance Support for your assets utilizing OCWA operator certified maintenance mechanics
- Process troubleshooting and optimization through OCWA's technical services group
- Staff training on deactivating unnecessary work orders, schedule/frequency changes or planning, and asset decommissioning
